2 Description of commands

2.1 DCRAM data write command

The DCRAM (data control RAM) has a 5-bit address to store the character codes of the CGROM and the CGRAM. The character codes specified by the DCRAM are converted into the character pattern of 5x7 dot matrix via the CGROM or the CGRAM.

To write-in the DCRAM, specify the DCRAM address and write-in the character codes of the CGROM and the CGRAM. For the setting relationship of the DCRAM address to the display timing, refer to section 2.4, Display timing set command. The command format is shown below.

【Command Format】

	MSB					LSB		
	B7	B6	B5	B4	B3	B2	B1	B0
1st byte (1st)	0	0	1	X4	X3	X2	X1	X0

The DCRAM data write mode is selected and the DCRAM address is specified.

2.2 CGRAM data write command

The CGRAM (character generator RAM) has a 3-bit address to store character Patterns of 5x7 dot matrix. Character patterns stored in the CGRAM can be outputted by specifying the character code (address) of DCRAM. The CGRAM addresses are assigned from 00H to 07H. (The other addresses are all for CGROM.) The CGRAM can store 8 types of character pattern.

The CGRAM can be written-in by specifying its address.

2.5 URAM control set command

The URAM (Universal Data RAM) has a 3-bit address to store the grid output data in the universal timing mode. The output data specified by the URAM is directly outputted in the universal mode. The URAM stores the output pattern of 16 grids for each timing. For the setting to the URAM, refer to the individual VFD specification, because setting values are fixed for each VFD. To write the URAM, specify the RAM address first, then write-in the grid output data. The command format is shown below.

【Command Format】

1st byte (1st)

MSB								LSB	
B7	B6	B5	B4	B3	B2	B1	B0		
1	0	0	*	*	U2	U1	U0		

 To select the URAM data write-in and the UDRAM address.
(Ex: The URAM address 00H is specified.)

2nd byte (2nd)

MSB								LSB	
B7	B6	B5	B4	B3	B2	B1	B0		
8G	7G	6G	5G	4G	3G	2G	1G		

 To write-in the grid output data of 1G to 8G.
(The data is written-into the URAM address 00H.)

3rd byte (3rd)

MSB								LSB	
B7	B6	B5	B4	B3	B2	B1	B0		
16G	15G	14G	13G	12G	11G	10G	9G		

 To write-in the grid output data of 9G to 16G.
(The data is written-into the URAM address 00H.)

● To continuously specify the output data, specify the grid output data only as shown below.
As the URAM addresses are automatically incremented, it is not necessary to specify the first byte. The specified addresses are specified from 0H to 7H incrementing 1 by 1.
Time between bytes (t_{DOFF}) is 2us(min).

4th byte (4th)

MSB								LSB	
B7	B6	B5	B4	B3	B2	B1	B0		
8G	7G	6G	5G	4G	3G	2G	1G		

 To write-in the grid output data of 1G to 8G.
(The data is written into the URAM address 01H.)

5th byte (5th)

MSB								LSB	
B7	B6	B5	B4	B3	B2	B1	B0		
16G	15G	14G	13G	12G	11G	10G	9G		

 To write-in the grid output data of 9G to 16G.
(The data is written into the URAM address 01H.)

U0 (LSB) ~ U2 (MSB) : URAM address (3 bits)

2.6 Dimming data write command

Brightness can be controlled in 240 levels using 8-bit data by setting the dimming data write command. When the power is supplied or the RESET signal is inputted, the register value is set to 0. Be sure to execute this command before turning on the display light. Then set the desired value.

2.7 Display light ON/OFF set command

The display light ON/OFF set command are used to turn on all the display lights or turn them off. The all display lights OFF mode is mainly used for blinking or protecting the display from any misoperation to be caused when the power is supplied. The command format is shown below.

● Flowchart of Commands

1 Basic flowchart of commands

The flowchart below shows the basic flow of commands from the time when power is turned on to the time when the display lights up. After the power is turned on, the values in 2 and 3 are set to the fixed value for each VFD used. Refer to the individual specification for the fixed value.

Note) For escaping error performance from noise, please regularly refresh and reset command entirely since initial set.

● Power-ON reset control

1 Power-ON reset circuit

For the power-on resetting, connect the resistor Rrst between the terminal to the logic power supply and the terminal to the system reset signal input, and the capacitor Crst between the RST terminal and the GND terminal. An example of the circuit connection is shown below.

Fig.1 Power-ON reset circuit

2 Timing chart of resetting

Input the reset signal according to the figure shown below. Be sure not to transfer commands immediately after the reset signal is inputted. Because the command transferred before the definition of the internal status of the circuit may cause malfunction. Besides that, the value of tRST varies depending on the externally built parts. It is recommended to transfer the command after allowing sufficient time for the IC to be defined. For the initial value after resetting, refer to the section 2.9

Vacuum Fluorescent Display Quality Inspection Standard

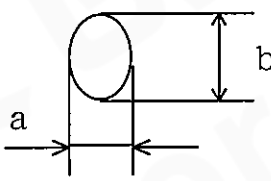

蛍光表示管品質判定基準

General 一般

This standard should be adapted to the VFD quality inspection.

本仕様書は蛍光表示管の品質検査規格に適用される。

Inspection Condition 検査条件

Item	Condition
①VFD Operating Condition. VFD 駆動条件	Typ. Recommended Condition 推奨TYP. 駆動条件
②Inspection Aide 検査付帯条件	The inspection is to be performed with Futaba standard filter* ¹ or a applicable customer's filter and unaided eyes from 30cm distance under brightness of 90－110 lx. Futaba標準フィルター* ¹ または顧客指定フィルターを通して30cmの距離から、90－110 lx の周囲照度にて、目視判定する。
③Defect Point Definition 不良点の測定方法	 $\phi S = \frac{a + b}{2}$

Limit sample should be provided upon mutual agreement by both parties when necessary.
限度見本は必要に応じ、両者協議の上設定するものとする。

Individual Quality Standard 個別品質基準

Item 項目	Phenomena 現象	Criterion 判定基準
① Foreign Particles・ Black Spot・ Printing Error 異物・黒点・ 印刷不良	Spots(Black spot)on the lighted segment due to dirt or dust. セグメントの斑点状の発光ムラ(黒点)。 	1.A black spot of over $\Phi 0.3\text{mm}$ is counted as defected point. $s=\Phi 0.3\text{mm}$ を超える物は不良とする。 2.In case of spot size is over $\Phi 0.2\text{mm}$,less than 0.3mm ,one spot on the same segment, or maximum 3 spots in a display is to be allowed. $\Phi 0.2\text{mm}$ 以上 $\Phi 0.3\text{mm}$ 以下は、セグメントに1箇所まで、 全セグメントに3箇所までを良品とする。 3.A spot of less than $\Phi 0.2\text{mm}$ should not be counted as defect point. $\Phi 0.2\text{mm}$ 未満の物は個数に拘わらず良品とする。
② Irregularity of segment shape by printing error. セグメント凹凸・ 印刷不良	Partial irregularity on a segment. セグメント形状の部分的凹凸 	1.Acceptable size of irregularities with respect to the segment width(L). セグメント幅(L)に対する凹凸の許容寸法。 $a=0.3\text{mm max.}$, $b=0.3\text{mm max.}$, acceptable. $a=0.3\text{mm}$ 以下、 $b=0.3\text{mm}$ 以下を良品とする。 2.In case of the (L) below 0.5mm wide,the acceptable irregularities is $a=1/2\text{max.}$ of the segment width(L). 尚、セグメント幅(L)が 0.5mm 以下の場合、 $a \leq 1/2L$ を良品とする。
③ Uneven luminance 輝度ムラ	Partial dark area on the lighted segment. 発光面の部分的な輝度差	No significant irregularity of luminance is acceptable. 著しい物は無き事。
④ Shaded Segment 字カケ	Shaded area appeared on the edge of segments セグメント端部の半影 	1.Shaded Segments up to $1/3$ of the segment width are accepted. セグメント幅(L)の $1/3$ までを良品とする。 2.In case of a segment below 0.5mm wide, the acceptable shaded segment should be up to $1/2$ of the segment width. 但し、 $L \leq 0.5\text{mm}$ の場合は、 $1/2$ 迄を良品とする。
⑤ Extra lighting モレ発光	Undesirable lighting area or points, a star dust or a bright spot due like to extra phosphor particle. 発光パターン以外への蛍光体付着 による星屑状、輝点状の不要発光	Extra lighting which can be clearly observed through the specified filter should be judged as a defect. 指定フィルターを通して不要発光のはっきり判る物を 不良とする。
⑥ Scratch/Stain on/in glass ガラス傷・汚れ	A scratch,dent,or foreign particles such as stain,attached on the surface or the inside of the front glass. フロントガラス内面・表面のガラス面の傷、 シミ等の異物付着	1.Scratch which can be clearly observed through the specified filter should be judged as defect. 指定フィルターを通して傷のはっきり判る物を不良 とする。 2.The criterion for the dent and foreign particle are the same as the specified in ①. 打痕状の傷、異物等は、①頁と同等判定とする。
⑦ Chip on the front glass and base plate ガラス欠け	For chip on the front glass and base plate,refer to the next page. ガラス欠けについては、次頁参照	Refer to the next page. 次頁参照
